

### **ABSTRACT OF THE DISCLOSURE**

An inkjet recording element having a support having thereon in order: a) a fusible, porous ink-receptive layer of fusible polymeric particles and a  
5 binder; b) a fusible, porous ink-transporting layer of fusible, polymeric particles  
and a film-forming, hydrophobic binder. The invention is also directed to an  
inkjet printing process wherein the ink-receptive layer and/or the support, each  
either alone or in combination, is capable of receiving substantially all of the ink  
carrier liquid received after the ink carrier liquid has passed through the ink-  
10 receptive layer.
